Learning COMET

TEACHING KIDS TO <CODE>

Kids will learn to code with fun hands-on projects. They will learn to program their own characters, animations, sounds and special effects using kid-friendly Scratch™ technology developed by MIT. Children will come up with their own video or game idea, code it, and even publish it to the web for all of their friends to play. Your child will have a blast and learn a ton!

Program coaches are qualified Engineers with Master Degrees and over 10 years of experience
